Swift Medical Overview

#1 Digital Wound Care Solution

Ranked by CB insights as one of the most promising digital health startups in the world.

~4,000 Healthcare Facilities

200,000 active patients under care across Canada & US.

Working with Top Providers and EMRs

Centerwell (Humana), Genesis Healthcare,
University Health Network, William Osler Health System
Home and Community Care Support Services CE
PointClickCare, Homecare Homebase, Epic, McKesson.

World's Largest Wound Care Dataset of > 22 Million Images & 45 Million Patient Encounters (Growing by >500k images/month)

Clinically Validated Outcomes

The Swift Skin & Wound technology and outcomes have been validated in **20+ peer-reviewed published journals and 35 scientific posters.**

Awarded Innovating Digital Health Solutions Funding from the Ontario Government

ONTARIO CENTRE OF INNOVATION ACCELERATES HEALTHCARE
INNOVATION WITH 8.2M FOR DIGITAL HEALTH SOLUTIONS

December 12, 2023

Swift Medical is participating in one of 13 projects selected by the Ontario Centre of Innovation to "revolutionize healthcare" by "implementing cutting-edge wound care technology for more accurate wound assessments, better documentation, and improved patient care."

The Wound Care Challenge

Wounds have a tremendous impact on individuals and the health care system.

1 in 500 Canadians will develop a non-healing wound¹

1 in 10 long-term care residents will experience a non-healing wound¹

5,000 limbs are amputated annually due to wounds, and that number is expected to rise²

Canada spends over \$3.9 Billion annually on direct costs of wounds³

1. Blanchette, V., & Kuhnke, J. L., (2021). The Current Situation for Non-healing Wounds. 19(1).
2. Ontario Wound Care Interest Group. "Fewer Wounds, Faster Healing: Framework for an Ontario Wound Care Strategy"
3. CIHI National Health Expenditure Trends, 1975 to 2011

The prevalence & impact of chronic wounds continues to grow

In 2023 the cost of chronic wounds was estimated to be **\$67 Billion (Medicare only).**

In 2030 the projected costs are expected to rise to **\$82 Billion (Medicare only).**

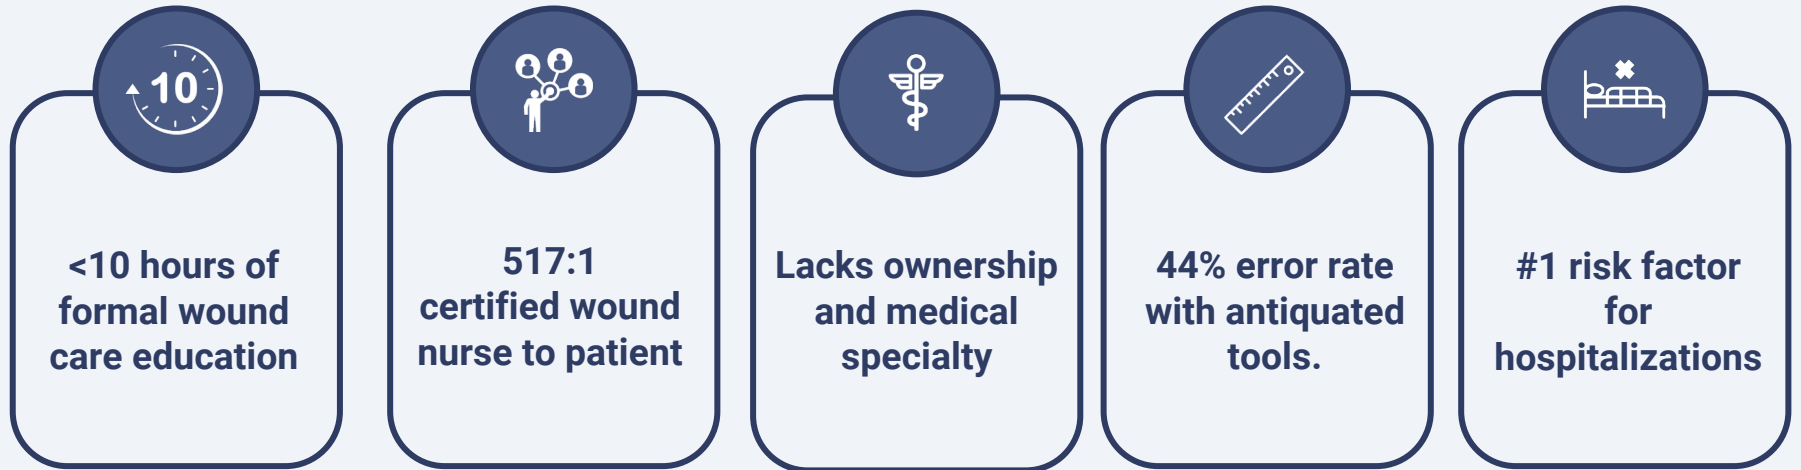

- **Diabetics** have a **34% lifetime risk of diabetic foot ulcers**. There are 37M diabetics in 2023, putting 11M at risk.
- Pressure injuries are the **third most costly disease** after cancers and cardiovascular diseases.

- The projected population for individuals with diabetes will rise to **55M in 2030**, putting **19M at risk**.
- An improperly treated diabetic ulcer increases the cost of diabetes care by **50-200%**.

- [Carter et al., 2023](#), Chronic wound prevalence and the associated cost of treatment in Medicare beneficiaries: changes between 2014 and 2019
- [Borojeny et al., 2020](#), The Incidence of Pressure Ulcers and its Associations in Different Wards of the Hospital: A Systematic Review and Meta-Analysis
- [Rowley et al., 2017](#), Diabetes 2030: Insights from Yesterday, Today and Future Trends

Wound care is not prioritized in our overall delivery system

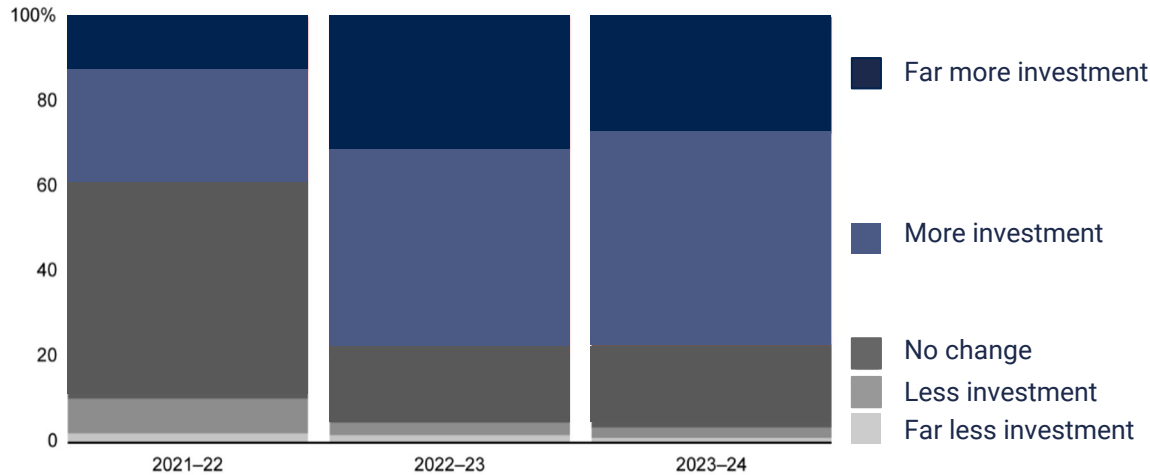

Diabetes Medicare patients **take longer to heal** - hospital stay **3.6 days longer** with **increased readmission rate**.

- American Diabetes Association
- [Carter et al., 2023](#) Chronic wound prevalence and the associated cost of treatment in Medicare beneficiaries: changes between 2014 and 2019

- [Langemo et al., 2015](#) Comparison of standardized clinical evaluation of wounds using ruler length by width

Industry is adapting through software and automation.

Percentage of health systems and hospitals citing a change in IT, software investments

Source: Bain-KLAS 2023 Provider Executive Survey (n=201)

Healthcare providers are accelerating spending on IT and software, with a focus on **clinical workflow optimization**.

Product

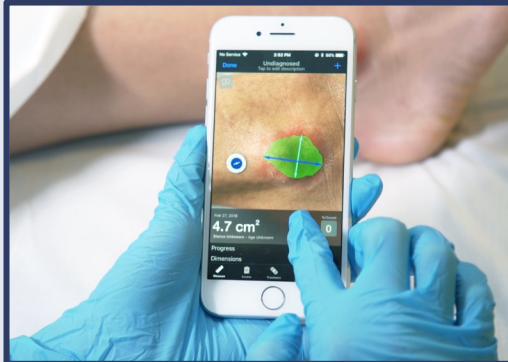

Product Solutions

Ensuring precision and visibility at every step.

Swift HealX

FDA registered scientific calibrant, ensuring data is calibrated for size, color and lighting.

Swift Application

Clinical application for clinicians (Swift Skin & Wound) and patients (Patient Connect). Available on iOS & Android compatible smartphones and tablets.

Swift Dashboard

Clinical analytics, case reviews and remote visibility supported in a centralized dashboard. Utilized by providers and third parties (e.g. health plans, DME).

Enabling coordinated care from patient to provider.

Automated measurements and documentation captured by the clinician or through remote patient access.

Clinical data and images sync in real-time, enabling remote consults and proactive care.

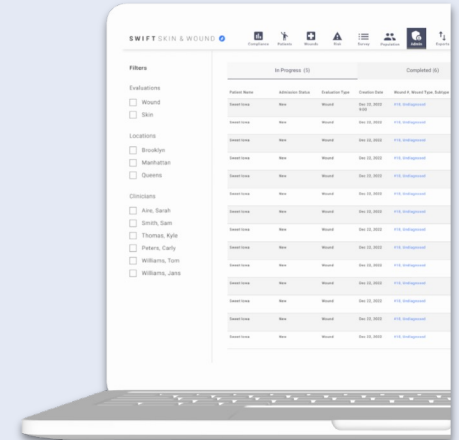

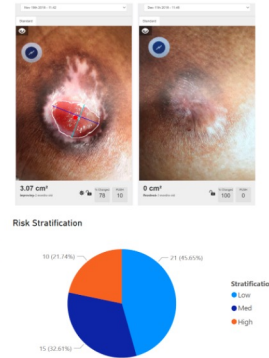

Provides shared skin visibility across clinicians, enabling compliant and cost effective care.

Top 10 Wound Patients				
First Name	Last Name	Date Created		Sum of Risk Score
Cynthia	Alvarez	Apr 28, 2023	1251	32

First Name	Last Name	Wound Type	Eligibility	Insurance
Julie	Zebra	Abrasion	N/A	Cigna
Monty	Python Knight	Blister	Verified	Humana
Alanna	Aro	Bruise	Failed	Medicare
Lars	Anderson	Bruise	N/A	Humana
Alanna	Aro	Burn	N/A	Blue Cross Blue Shield of Michigan

Patient & Wound List					
First Name	Last Name	Facility	Wound Type	Body Location	Stratification
Julie	Zebra	Blue Swift Hills	Abrasion	Right Knee	Med
Monty	Python Knight	Blue Swift Hills	Blister	Rear Right Shoulder	Low
Alanna	Aro	Blue Swift Hills	Bruise	Right Lower Back	Low
Lars	Anderson	Blue Swift Hills	Bruise	Left Lateral Medialview	High
Alanna	Aro	Blue Swift Hills	Burn	Left Inner Forearm	Low
Alanna	Aro	Blue Swift Hills	Burn	Left Inner Forearm	Low
Alanna	Aro	Blue Swift Hills	Burn	Right Buttock	Med
B.	Hall	Blue Swift Hills	Burn	Lateral Right Foot	Med
B.	Hall	Blue Swift Hills	Burn	Sole Right Foot	Med
Andrew	Hall	Blue Swift Hills	Cancer Lesion	Left Thigh (Front)	High

Our outcomes and AI-derived innovations are fueled by the world's most powerful wound care dataset.

>23+ million wound evaluations and images

Unmatched size, quality, diversity that spans all care settings.

Layering AI and Advanced Wound Imaging

AutoDepth

Automated, non-contact assessment method for wound depth, providing objective inputs to wound prognostic models.

Measurement precision.

Continuity of care across teams and clinicians.

Patient engagement and education.

SmartTissue

Quick and accurate assessment of wound bed tissue classification, providing objective identification of epithelial, granulation, slough, and eschar tissue.

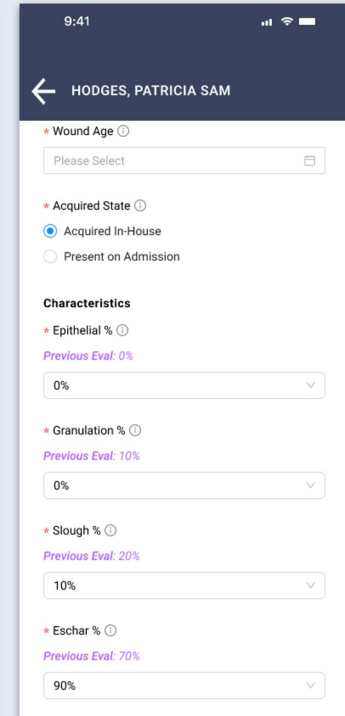

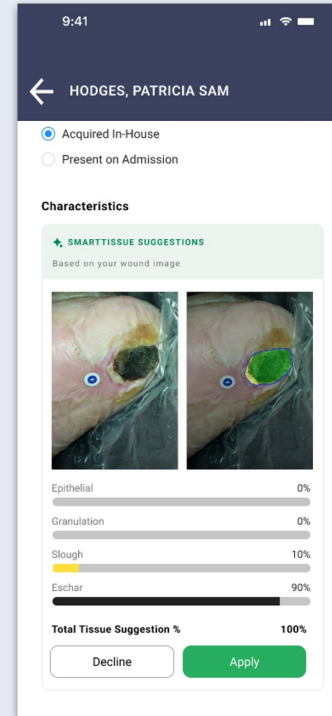

Compliant documentation for reimbursement.

Trained on world's most diverse wound dataset.

Informs accurate treatment selection and care plan management.

HealingIndex and SmartProgress

Proprietary model providing an objective assessment of healing risk, with intelligent suggestions to inform clinical decision making.

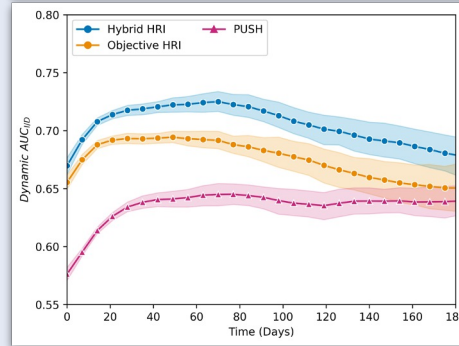

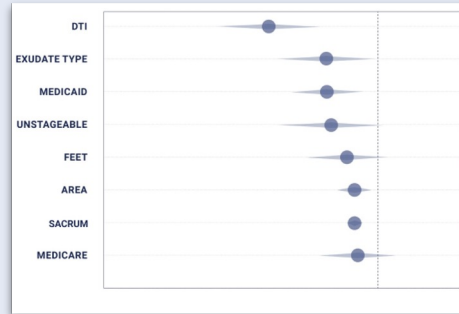

Risk stratification and triage support across patient population.

More precision in predicting risk than standard wound assessment tools.¹

Supports the prevention of adverse events through earlier risk identification.

* Progress ⓘ

Generate

SMARTPROGRESS SUGGESTION

Based on your responses

Wound is **deteriorating** because the following has changed from the evaluation ~7 days ago

- Area increased from 12.5 cm² to 15 cm²
- Exudate increased from scant to heavy
- Edges changed from none to distinct

 **CenterWell**

350+ Home Health locations
across 38 states serving 350
000+ patients/ year

“

In the home, as a complement to **developing value-based home health payments**, we've launched a comprehensive initiative to reimagine our scale on health operations. These efforts will be deployed across our more than 350 branches that will include automation, consolidation and implementation technology and AI solutions. This will **minimize administrative cash while improving clinician productivity**, including optimizing their schedule. We believe these initiatives, some of which require incremental investment will **ultimately streamline our operations and lead to increased clinical -- clinician productivity and satisfaction.**

As an example, **CenterWell Home Health has introduced an innovative AI-enabled digital wound management solution** which allows our clinicians to effectively capture vital details with a simple picture. We are pleased to report a **notable 18% improvement in visit efficiency**, thus enhancing the experience, both clinicians and patients. This has been instrumental in clinical decision-making contributing to an **accelerated wound healing time by 35%.**”
